ADVANTAGES OVER OTHER PRODUCTS:

- Quick-Acting Absorbent
- Reusable (Cuts Cost Of Materials)
- No More Lost Inventory Due To Busted Bags (Suck-Up Is Packaged In A Plastic Container)
- **Most Cost Effective Absorbent On The Market Today**

SAFER WORK AREA
- CLEANS SPILL
THOROUGHLY

B.E.S. Suck-Up, a reusable, environmentally safe liquid absorbent material, is specially formulated with all natural aggregate that will clean up most any liquid spill (all oils, water, paint, ink, gasoline, kerosene, diesel, etc.). Suck-Up in most cases is a simple three step process. Pour on, scrub in, and sweep up. In order to reuse the product, allow Suck-Up to dry for a few minutes and replace material back into the plastic container for reuse up to 3 times. B.E.S. Suck-Up encapsulates and prevents leaching of contaminated liquids up to saturation point. Besorb's absorption capacity is so strong that it will absorb water and antifreeze after it has been saturated with oil or fuel.

DIRECTIONS: Apply immediately around spill. Work in Suck-UpTM with a brush or broom. Sweep up and dispose of properly or store in container for re-use (except for paint/ink).

NOTE:

B.E.S. Suck-Up must be disposed of according to all applicable Federal, State, and local regulations for the liquid absorbed. For safety only properly trained and equipped personnel should respond to hazardous waste spills.
